and is derived by analysis of the total score distribution.
wo. Is the number of results predicted by chance to have a greater than or equal to the score of the result being printed entired by analysis of the total score distribution.
ter than or equal to the score of the result being printed ived by analysis of the total score distribution.
than or equal to the score of the result being printed by analysis of the total score distribution.
number of reputts producted by chance to have a or equal to the score of the result being printed, analysis of the total score distribution.
equal to the score of the result being printed. yeis of the total score distribution.
to the score of the result being printed of the total score distribution.
the score of the result being printed the total score distribution.
score of the result being printed total score distribution.
of the result being printed, score distribution.
the result being printed e distribution.
result being printed.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC novel protein kinases have been identified as members of the tyrosine CC or serine/threonine kinase (PTK and STK) families. The polynucleotides CC encoding protein kinase (PTK and STK) families. The polynucleotides CC encoding protein kinase and the polypeptides may be used in the CC inappropriate kinase expression. For example, they may be used to treat CC cancers (especially cancers of haematopoletic origin), cardiovascular CC disease (e.g. atherosclerosis), metabolic disorders (e.g. diabetes), CC immune related diseases (e.g. rheumatoid arthritis), neurological CC disorders (e.g. schizophrenia), neurodegenerative disorders (e.g. diabetes), cC disease (e.g. HIV) and reproductive disorders (e.g. asthma), infectious CC disease (e.g. HIV) and reproductive disorders (e.g. infertility). CC additionally, polynucleotides encoding protein kinases may be CC used for gene thorapy and as DNA probes in diagnostic assays.

CC The protein kinase polypeptides may be used as antigens in the production of antibodies against the protein kinases and in assays to identify comodulators of protein kinase expression and activity.

The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, hasemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S. disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        21-JAN-2000;

Tissues that express PPHKP-5 (as a C fraction of total tissues expressing PPHKP-5) include reproductive (0.288), gastrointestinal (0.212) and haematopoietic or immune (0.192). Diseases or conditions associated with tissues expressing PPHKP-5) include reproductive (0.192). Diseases or conditions associated with tissues expressing PPHKP-5) include cancer (0.577), inflammation or trauma (0.327) and cell cancer (0.577), inflammation or trauma (0.327) and cell proliferation (0.308). The encoded protein shows homology to rat kinase. The invention provides human PPHKP-1 to -11 polypeptides (see AAB20322-32) and polynucleotides (see AAF30476-86). It also provides expression vectors, host cells, antibodies, agonists and antagonists, as well as methods for diagnosing, treating or preventing disorders associated with expression of PPHKP, including gastrointestinal disorders, immune system disorders, neurological disorders and cell proliferative disorders, including cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activinjoinhbin activity, chemotactic/chemokinetic activity, harmostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                       assays

```

The invention provides an isolated human tribbles homologue-1 (htrb-1, cc also known as stress kinase inhibitor protein (SKIP-1)) polypeptide. The cc htrb polypeptide is useful for inhibiting an AP-1 mediated inflammatory cc signal in a cell. The polypeptide employed in the method is preferably cc htrb-1, htrb-1 N htrb-1 C, htrb-1 N C, htrb-3 N htrb-3 C, or cc htrb-3 N C. It is also useful for providing htrb agonist activity for cativating an ERK-mediated signal e.g. AP-1-mediated gene activation signal, an estrogen receptor-mediated gene activation signal, an cell. Htrb modulators are useful for modulating AP-1 mediated for induced signal, or a pMA induced signal, cc induced inflammatory signal, or an interleukin induced inflammatory compounds e.g. for an interleukin induced inflammatory signal, or an interleukin induced inflammatory candidated for an interleukin are useful for cand in therapeutics or prophylactics. The htrb proteins are useful for compounds e.g. for treating and/or preventing diseases caused by abnormal htrb activity, such as rheumatoid arthritis, disbetces, cc psoriasis, osteoporosis, diabetic retinopathy, myocardial infarction candidated conditions are useful for antagonizing conformal white matter damage and subsequent cerebral paley candinflammation or autoimmune disorders. The present sequence represents the htrb-3 polypeptide.

The present sequence represents a partial polypeptide which has kinase activity. The kinase polynuclectides can be used to express the polypeptides, and as probes to identify nucleic acids encoding proteins having kinase activity. The kinase polypeptides and fragmented polypeptides are used as molecular weight and isoelectric focusing markers, and as controls for peptide fragmentation. They also have a number of therapeutic uses as kinases play a central role in cellular signal transduction. The polypeptides could also be used to identify binding partner proteins. The polypeptides can also be used as a reagent to identify any proteins that the polypeptide regulates, and proteins with which it might interact. The polypeptides may also be used for preparation of antibodies. The antibodies can be used in assays to detect the presence of the protein, and to purify the protein by immunoaffinity chromatography.

The invention provides PKIN. The PKIN polypept

polypeptides

human kinases (PKIN) a

and polynucleotides encoding using standard recombinant

Claim 1; Page 115; 126pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          methodology. The PKIN polypeptides, polynucleotides, modulators and specific antibodies are useful in the diagnosis, treatment and prevention of cancer, immune disorders, disorders affecting growth and development, atherosclerosis, and other cardiovascular diseases, and lipid disorders and in the assessment of the effects of exogenous compounds on the expression of nucleic acid sequences of human kinases. The present sequence represents a human PKIN-10 polypeptide.

(COMP-) COMPUGEN LTD

Mintz L, Freilich S,

One hundred and twenty eight novel nucleic acid sequences, useful for treating and diagnosing e.g. cancer, asthma and Alzheimer's -

Claim 6; Page 231-232; 290pp; English.

CC ABL39691 to ABL39818 represent novel human nucleic acid sequences concoding the proteins given in ABB06037 to ABB06164. The novel sequences concoding the proteins given in ABB06037 to ABB06164. The novel sequences concoding the proteins given in ABB06037 to ABB06164. The novel sequences concoding the proteins given in ABB06037 to ABB06164. The novel sequences concoding the protein given giv and

The invention provides an isolated human tribbles homologue-1 (htrb-1, also known as stress kinase inhibitor protein (SKIP-1)) polypeptide. The htrb polypeptide is useful for inhibiting an AP-1 mediated inflammatory signal in a cell. The polypeptide employed in the method is preferably htrb-3 N C. It is also useful for providing htrb agonist activity for activating an ERK-mediated signal e.g. AP-1-mediated gene activation signal, an estrogen receptor-mediated gene activation signal, an estrogen receptor-mediated gene activation signal, an a cell. Htrb modulators are useful for modulating AP-1 mediated inflammatory signal in a cell such as tumor necrosis factor (NP) induced inflammatory signal in a cell such as tumor necrosis factor (NP)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; tribbles; htrb-1; stress kinase inhibitor protein; SKIP-1; AP-1; antifhoumatic; antiarthritic; antidiabetic; antipsoriatic; osteopathic; opthalamological; cardiant; cytostatic; haemostatic; immunosuppressive; antinflammatory; estrogen receptor; fibroblast growth factor; FGF; tumour necrosis factor; TNP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel isolated human tribbles homologue-1 polypeptide for inhibiting AP-1-mediated inflammatory signal in a cell, and activating ERK-mediated signal e.g. AP-1-mediated gene activation signal in a cell

The htrb proteins are useful for screening compounds e.g. for treating and/or preventing diseases caused by abnormal htrb activity, such as rheumatoid arthritis, diabetes, psorissis, osteoporosis, diabetic retinopathy, myocardial infarction and cancers. The htrb therapeutics are useful for antagonizing interleukin-1 dependent disorders of human placenta, intraventricular hemorrhage, neonatal white matter damage and subsequent cerebral palsy; and inflammation or autoimmune disorders. The present sequence represents the htrb-1 polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence

CC involved in increasing haematopoiesis, stem cell survival, bone growth CC and remodeling. (I), (II) and modulators of (II) are useful for CC prophylaxis or treatment of one or more cancers. (II) is also useful for CC creating transgenic animals useful for studying the in vivo activities of the polypeptide as well as for studying the in vivo activities of CC (II) induces the proliferation of neural cells and regeneration of nerve and brain tissue and is useful for the treatment of central and CC parkinson's disease, Huntington's disease, and amyotrophic lateral CC sclerosis. In addition, (I) is involved in chemotactic or chemokinetic CC activity, regulation of haematopoiesis and is useful for treating myeloid CC armyphoid cell disorders, platelet disorders such as thrombocytopenia and for regeneration of bone, cartilage, tendon, ligament and/or nerve clissue growth, and in tissue repair, healing of burns, incisions, CC ulcers, for treating osteoporosis, osteoarthritis, bone degenerative cd disorders, or periodontal disease. Furthermore, (I) is also useful for cgut protections, autoimmune disease. Furthermore, (SCID), baccerial or fungal infections, such as astiman or citer respiratory problems. CC reactions and conditions, such as astiman or other respiratory problems. CC restility, metabolism, catabolism, anabolism, storage or elimination of camino acid serios and can act as an antigen in a vaccine composition to raise an commune response. ANU28020-ANU28035 represent novel human secreted protein camino acid seminos of the invention.

**Example** 2 SEQ ID No 680; 107pp; English.

CC The invention relates to novel isolated human secreted polypeptides (I) CC and polynucleotides (II). (I) and (II) are useful for treating CC inflammatory conditions such as arthritis, nephritis, Crohn's disease, CC ischaemia-reperfusion injury, shock, sepsis, immune responses, and is CC involved in increasing haematopoiesis, stem cell survival, bone growth CC and remodeling. (I), (II) and modulators of (II) are useful for CC prophylaxis or treatment of one or more cancers. (II) is also useful for CC the polypeptide as well as for studying modulators of the polypeptides. (CC (I) induces the proliferation of neural cells and regeneration of nerve and brain tissue and is useful for the treatment of central and CC peripheral nervous system diseases and neuropathles, such as Alzhaimer's, CC Parkinson's disease, Huntington's disease, and amyotrophic lateral CC sclerosis. In addition, (I) is involved in chemotactic or chemokinetic cor lateral attion of haematopoiesis and is useful for treating myeloid CC artivity, regulation of haematopoiesis and is useful for treating myeloid CC and for regeneration of bone, cartilage, tendon, ligament and/or nerve tissue growth, and in tissue repair, healing of burns, incisions,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ulcers, for treating osteoporosis, osteoarthritis, bone degenerative disorders, or periodontal disease. Purthermore, (1) is also useful for gut protection or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues, various immune deficiencies and disorders including severe combined immunedeficiency (SCID), bacterial or fungal infections, autoimmune disorders e.g. multiple sclerosis, reactions and conditions, such as asthma or other respiratory problems. In addition, (1) affects blorhythms or circadian cycles of rhythms, fertility, metabolism, catabolism, anabolism, storage or elimination of distary fat, lipid, protein, carbohydrate, vitamins, minerals, provides analgesic effects or other pain reducing effects, immunoglobulin like activity and can act as an antigen in a vaccine composition to raise an immune response. AAU28020-AAU28035 represent novel human secreted protein

                                                                                                                                                                                                                                                                                                                   The present invention describes a method for diagnosing a cancer in a mammal. The method comprises detecting and measuring the C8PW gene copy number or level in a biological subject from a region of the mammal that is suspected to be pre-cancerous or cancerous to generate data for a test gene copy, and comparing the test gene copy number or level to a data for a control gene copy number or level, where an amplification of the gene in the biological subject relative to the control indicates the presence of a pre-cancerous lesion or cancer in the animal. C8FW has cytostatic activity, and can be used in vaccines. The method can be used for the diagnosis, prevention, treatment and prognostication of breast, colon, lung, brain, prostate and/or ovarian cancer. The present sequence represents human C8FW from the present invention. C8FW is a phosphoprotein regulating mitogenic pathway protein.
                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cancers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Diagnosing, preventing, treating and prognosticating a cancer in a mammal by detecting and measuring the CBFW gene copy number and/or C8 level, useful for breast, brain, lung, colon, ovarian and/or prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 16; Page 86; 86pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01951), expressed DNA sequences (ABL019737-ABB16175) and the encoded proteins (ABB7377-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Disclosure; SEQ ID NO 40929; 21pp + Sequence Listing; English.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Biophys. Res. Commun. 258:260-264(1999).

-!- FUNCTION: May play an important role in a common pathway leading to programmed neuronal cell death. Does not appear to function in the programmed death of non-neuronal cells. May serve as an endogenous antagonist competing for substrate with functional kinases that act to promote neuronal cell survival.

-!- TISSUE SPECIFICITY: Detected only in the lung. Not detected in the heart, brain, spleen, liver, skeletal muscle, kidney and testis.

-!- INDUCTION: Expression induced during programmed cell death evoked in neuronal cells by NGP-depletion.

-!- SIMILARITY: Contains 1 protein kinase domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This SWISS-PROT entry is copyright. Cell Biol. 2:531-539(2000).

FUNCTION: Adapter protein involved in asymetrical cell division and cell polarization processes. May play a role in the formation of epithelial tight junctions. The PARD6-PARD3 complex links GTP-bound Rho small GTPases to atypical protein kinase C proteins (By
